

CLAIMS

The listing of the claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-5 (cancelled)

6. (previously presented) A display station for use in wireless communication with an information source, comprising:

a flexible substrate having display circuits imprinted thereon to form a flexible display screen;

at least one integrated circuit chip mounted on said flexible substrate for controlling said display and enabling wireless communication with the information source; and

means for winding up said flexible display screen.

7. (previously presented) The display station of Claim 6 wherein said at least one integrated circuit chip is contained in a box that hangs below said display screen and causes the display screen to hang straight.

Claim 8. (cancelled)

9. (previously presented) The display station of Claim 6 wherein said means for winding up includes a spring that winds up and stores energy as said display screen is extended from its stored position to an extended position and upon release urges said display screen from said extended position to said stored position.

10. (previously presented) The display station of Claim 6 wherein said at least one integrated circuit chip is configured to drive sound-generating devices.

Claims 11-13. (cancelled)

14. (previously presented) A display station for use in wireless communication with an information source, comprising:

a flexible substrate having display circuits carried thereby to form a flexible display screen; and

at least one integrated circuit chip carried on said flexible substrate and including display

drivers and a radio frequency transceiver for permitting said wireless communication with the information source;

said display screen having a free end and said at least one integrated circuit chip being mounted on the free end of said display screen for serving as a weight to cause said display screen to hang substantially straight.

15. (previously presented) The display station of Claim 14 wherein said at least one integrated circuit chip is configured to drive sound-generating devices.

16. (previously presented) The display station of Claim 6 wherein said at least one integrated circuit chip includes speech recognition circuits.

17. (previously presented) The display station of Claim 14 wherein said at least one integrated circuit chip includes speech recognition circuits.

18. (previously presented) The display station of Claim 6 wherein the at least one integrated circuit chip includes a micro-controller chip, a display driver chip and a radio-frequency chip.

19. (previously presented) The display station of Claim 14 wherein the at least one integrated circuit chip includes a micro-controller chip, a display driver chip and a radio-frequency chip.
